8 November 1963

MEMORANDUM FOR THE RECORD

SUBJECT: Trip Report Concerning the Image Enhancement Viewer

25X1A

1. On 5 November 1963 [REDACTED] held a conference with [REDACTED] of the Itek Corporation. Although the proposed fabrication of the instrument was scheduled at least by 1 November, approximately one or two weeks seems to be required for electrical cable connection and checkout.

STATOTHR

STATOTHR

[REDACTED] program was reviewed by [REDACTED] and certain aspects were resolved to the latter's satisfaction. It was requested that all phases of the research program be tried on the NPIC instrument in order that operational procedures be verified. The fact was established that [REDACTED] program for enhancement of low altitude photography would be carried out not as a portion of the BB 425, T.O. 4 contract but on a company proprietary basis. Use of our instrument will be made and this arrangement will not necessitate an extension of the Phase II contract time.

It is recommended that another visit be scheduled for 19 November in order to determine the progress on the research portion and also to make sure that the fabrication and checkout of the instrument has been completed. [REDACTED] will accompany [REDACTED] and I in order to become familiar with the design concept of the Image Enhancement Viewer.
